

MARQUESAS AREA FISHERY AND ENVIRONMENTAL DATA, OCTOBER 1957 — JUNE 1958

SPECIAL SCIENTIFIC REPORT — FISHERIES No. 283

**UNITED STATES DEPARTMENT OF THE INTERIOR
FISH AND WILDLIFE SERVICE**

Explanatory Note

The series embodies results of investigations, usually of restricted scope, intended to aid or direct management or utilization practices and as guides for administrative or legislative action. It is issued in limited quantities for the official use of Federal, State, or cooperating Agencies and in processed form for economy and to avoid delay in publication.

Special Scientific Report--Fisheries No. 283

WASHINGTON: NOVEMBER 1958

ABSTRACT

This report presents the biological, environmental, and meteorological data from four consecutive cruises, October 1957 to June 1958, in the part of the southeastern Pacific Ocean that is centered in the Marquesas Islands. Primary mission of these cruises was to define the season of greatest availability of surface tuna schools in the Marquesas area.

Tabulated data include the following: observations of weather, water color, and water transparency; determinations of zooplankton volumes, surface salinities, and phosphates; observations at bathythermograph lowerings, tuna school sightings, surface fishing operations, and baitfish surveys.

Honolulu, T. H.

The purpose of this report is to present the record of observed data made during four consecutive cruises in the part of the south-eastern Pacific Ocean that is centered in the Marquesas Islands. The cruises were part of a program undertaken by the Pacific Oceanic Fishery Investigations (POFI) to study the tuna resources of the southeastern Pacific. It is the third POFI report which presents observed data from this area. The first (Austin 1957) contains the record of observed data made during cruises in August and September 1956. The second (Wilson and Rinkel 1957) contains results from cruises made during January-March 1957.

In order to make these data rapidly available to other agencies studying the Pacific Ocean, they are presented here without analysis. Descriptive and analytical reports will follow.

The primary mission of the four expeditions was to continue the surface tuna school surveys in the Marquesas area, with the cruises scheduled so that the season of greatest availability of tuna schools might be revealed.

Secondary missions were to continue the study of the biology of the tuna and of live-bait resources in the Marquesas area, to continue the marking of tunas with the D-2 dart tag (Yamashita and Waldron 1958) and to continue studies of the abundance and distribution of tuna larvae.

Two POFI research vessels, the Charles H. Gilbert and the Hugh M. Smith, were assigned (fig. 1). In order to accomplish the primary mission, two types of surface tuna school surveys were carried out, the inshore and the offshore (fig. 2). The cruise and survey dates are listed in table 1.

In addition, another important mission was included in cruise 45 of the Smith. In cooperation with the R/V Horizon of the Scripps Institution of Oceanography, a study of the Equatorial Undercurrent was carried out during the period April 4-29, 1958, as part of the International Geophysical Year program. Preliminary results of this survey have been reported by Knauss and King (1958).

Table 1.--Marquesas Islands cruises

Vessel and cruise No.	Cruise period	Survey dates	
		Inshore	Offshore
<u>Charles H. Gilbert</u> 35	Oct. 2-Dec. 14, 1957	Oct. 14-20 Nov. 24-30	Oct. 24-Nov. 6
<u>Hugh M. Smith</u> 43	Jan. 3-Feb. 25, 1958	Jan. 18-25	Jan. 27-Feb. 12
<u>Charles H. Gilbert</u> 38	Feb. 7-May 2, 1958	Feb. 27-Mar. 8 April 11-19	Mar. 26-Apr. 8
<u>Hugh M. Smith</u> 45	Mar. 28-June 23, 1958	June 1-10	May 14-29

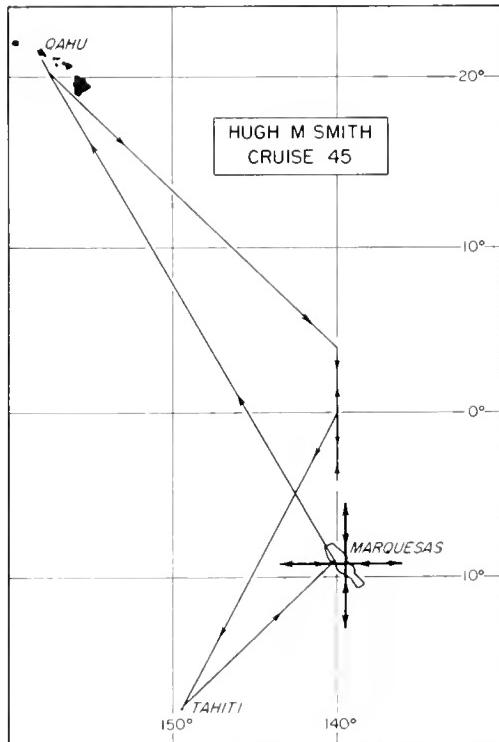

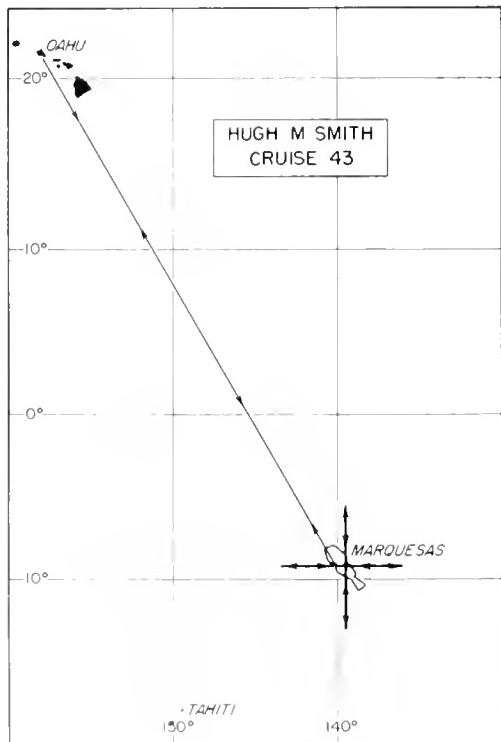

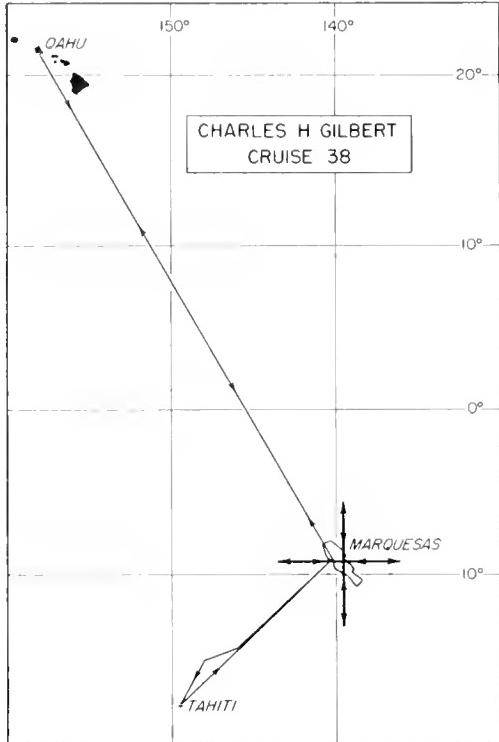

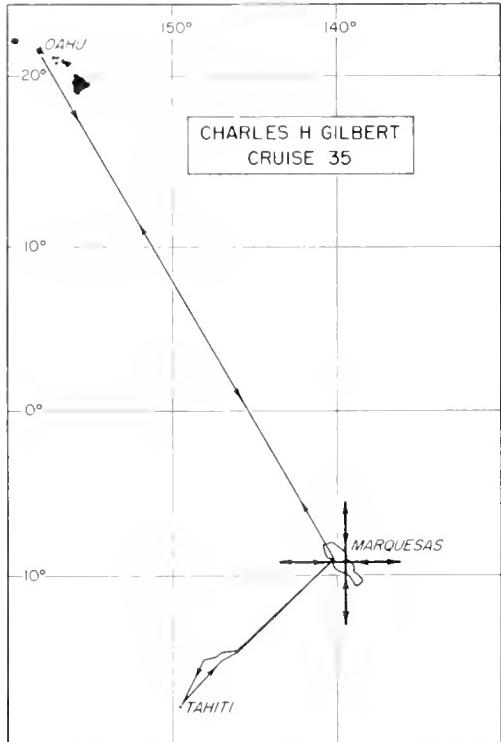

Figure 1.--Vessel tracks of four cruises.

Figure 2.--Standardized inshore and offshore survey tracks, Marquesas area.

FIELD PROCEDURES

Bathythermograph and Meteorological observations

Except where noted below, bathythermograph (BT) lowerings on the four cruises were made according to the following schedule: every 6 hours between Honolulu and latitude 11°N., every 3 hours between latitude 11°N. and the Marquesas, local noon daily in the Marquesas area while on both inshore and offshore surveys, every 3 hours on the offshore survey, at each tuna fishing station, and every 6 hours on the run between Tahiti and the Marquesas.

BT lowerings during cruise 38 of the Gilbert were made every 6 hours enroute from Honolulu to the first longline fishing station at latitude 5°N., longitude 150°W. Three lowerings were made at each of the seven fishing stations; one immediately after setting, the second just prior to retrieving, and the third immediately after retrieving the longline gear. One BT lowering was made mid-way between fishing stations along 150°W. longitude (fig. 1). Aside from the foregoing deviations, BT lowerings were made following the schedule listed above.

The BT schedule followed during cruise 45 of the Smith differed only in that lowerings were made every 6 hours to latitude 4°N. on the run south from Honolulu.

Nine hundred-foot BT's were used on all the cruises. Observations made in conjunction with BT lowerings were coded according to H. O. Pub. 606-c, and recorded on Oceanographic Log Sheet B. These observations are presented in tables 2, 3, 4, and 5. The observations made during that portion of Smith cruise 45 concerned with the Undercurrent are not included here.

BT lowerings totalled 295 during Gilbert cruise 35, 263 during Smith cruise 43, 336 during Gilbert cruise 38, and 264 during Smith cruise 45.

Determinations from analyses of surface salinity and surface inorganic phosphate samples taken at BT lowerings are included in tables 2, 3, 4, and 5. Surface salinity values plus surface temperatures for locations other than BT lowerings are presented in table 10. Both the surface salinity and surface inorganic phosphate samples were returned ashore for analysis with the exception that some phosphate samples were analyzed aboard the vessel during Smith cruise 45. The phosphate samples were frozen as a means of preservation.

During the four cruises, standard weather observations were made up to 4 times daily. They were omitted when the vessels were in bays or harbors, and were made sporadically during fishing periods. The observations, as encoded according to U. S. Weather Bureau Form 1210-F, are presented in tables 6, 7, 8, and 9. Weather observations made during the Undercurrent survey portion of the Smith are not included in table 9, and will be presented elsewhere.

Productivity observations

Water color and transparency observations were made routinely at local noon daily, during survey periods in the Marquesas area. The transparency measurements were made by lowering a 30-cm. Secchi disc. The water color observations were made by comparison with the Forel standard. In addition, photometer readings were made during Smith cruise 45 at the diurnal variability station (9°34'S., 139°50'W) and between 5°S. and 10°N. on the run between the Marquesas and Honolulu. These and related data are presented in tables 11, 12, 13, and 14.

Three types of plankton hauls were made during the four cruises with a 1-meter net of 656 Nitex (aperture width 0.66 mm.), similar to that which has been described by King and Demond (1953). The purpose of these hauls was to obtain a measure of the standing crop of zooplankton, and to determine the distribution and abundance of tuna larvae. On all the four cruises, a 30-minute oblique tow to a depth of 140 meters was made each night during the runs to and from the Marquesas. During the offshore surveys in the Marquesas, two 0-140 meter tows were made nightly. During the offshore survey conducted during Gilbert cruise 35, these nightly tows were paired half-hour tows.

Upon completion of the inshore surveys conducted during all four cruises, a 24-hour plankton station was occupied at latitude 9°34'S., longitude 139°50'W. The purpose of this station was to obtain data on the diurnal variability of zooplankton and tuna larvae. Two of these stations were occupied during Gilbert cruise 35, and paired 0-140 meter half-hour tows were made every 3 hours. One station was occupied during Smith cruise 43, and a single 0-140 meter half-hour tow was made every 2 hours. Two stations were occupied during Gilbert cruise 38, and single 0-140 meter half-hour tows were made every 2 hours. At the one station occupied during Smith cruise 45, 2-net tows were made, a 1-meter open net towing in the depth range 0-140 meters and a 1-meter closing net in the depth range 140-280 meters. The latter type of net has been described by King et al. (1957). These half-hour 2-net tows were made every 2 hours.

Seven half-hour 0-140 meter hauls were made at night between the Marquesas and Tahiti, during Gilbert cruise 35. The station data and plankton volumes for hauls made during the four cruises are presented in tables 15, 16, 17, and 18.

Surface trolling

Except when otherwise engaged, the vessels did surface trolling during daylight hours with varying numbers of lines. The catches and related data for the four cruises are presented in tables 20, 21, 22, and 23. The common and scientific names of fish caught are listed in table 19.

Longline fishing

During Gilbert cruise 38 a series of seven longline fishing stations was occupied along longitude 150°W. between latitude 5°N. and 1°S. (fig. 1). At each station, 44 baskets of 11-hook longline gear were set. The gear used was of POFI design, as described by Mann (1955). Pacific herring (*Clupea pallasii*) was used as bait. The longline station data and catch per 100 hooks are presented in table 24; the catch record and sizes of fish in table 25.

Live-bait fishing

During the course of the inshore and offshore surveys in the Marquesas and in the Tuamotus, fishing trials with live-bait were made on tuna schools encountered. The purpose of these fishing trials was to determine the species and size of tuna in the school, to obtain material for biological studies, to continue the tagging of tunas, and to make observations of biting behavior. The live-bait fishing techniques used were similar to those of the Hawaiian skipjack fishery, as described by June (1951). The Marquesan sardine was used as bait. The station data, catches, and amount of bait used in tuna school fishing trials during the four cruises are presented in tables 26, 27, 28, and 29. The length frequency by sex of samples of yellowfin and skipjack caught during these fishing trials are given in tables 30 through 34, inclusive.

Baitfish surveys

Two procedures were used for conducting baitfish surveys in the Marquesas; daylight visual scouting and night-light fishing. Scouting during the day was done by three or four swimmers, equipped with face plates, making a visual sweep of the shallow water in the bays, and noting the schools of bait-sized fish. The procedure and equipment used for capturing bait during the day has been described by June (1951). Night-light fishing was done with the vessels anchored in about 40-foot depth of water. Marquesan sardines of all sizes were found to be attracted to the diffused light from a flood-light, and the fish were caught alongside the vessel by using a night net of specialized design. The results of visual scouting, day and night-light fishing for the four cruises are given in tables 35 through 38, inclusive. The length frequency by sex of Marquesan sardine samples is presented in tables 39 through 42, inclusive.

Birds, tuna schools, and aquatic mammals

During daylight hours on all four cruises, a watch was maintained for birds, tuna schools, and aquatic mammals. Summaries of these observations are presented in tables 43 through 47 inclusive.

Field party personnel

Charles H. Gilbert - William T. Tanaka,
Master

Cruise 35

Robert C. Wilson, Field Party Chief
Eugene L. Nakamura, Fishery Research Biologist

Cruise 38

Tamio Otsu, Field Party Chief
Howard O. Yoshida, Fishery Research Biologist

Hugh M. Smith - Barnes Collinson, Master

Cruise 43

Donald W. Strasburg, Field Party Chief
Richard N. Uchida, Fishery Research Biologist

Cruise 45

Joseph E. King, Field Party Chief
Murice O. Rinkel, Oceanographer
Richard J. Hansen, Fishery Aid.
John W. Van Landingham, Physical Science Aid
Takuji Fujimura, Collaborator, Hawaii Division of Fish and Game
Stanley I. Shima, Collaborator, Hawaii Division of Fish and Game

LABORATORY PROCEDURES

Salinity and Phosphate determinations

The salinity samples were analyzed by a modification of the method of Knudsen (Van Landingham 1957). The inorganic phosphate samples were analyzed by the hydrazine sulphate modification of Denige's method (King et al. 1957).

Zooplankton

Details of the method for determining displacement volumes of zooplankton are described by King and Hida (1957).

Personnel processing samples and data

(In addition to the authors)

John W. Van Landingham, Physical Science Aid

Thomas M. Okano, Physical Science Aid

Mary Lynne M. Godfrey, Physical Science Aid

Betty Ann L. Keala, Statistical Clerk

1/ Stations 7 through 148 are on +9 ZT; others are on +10 ZT.

2/ Messenger time was not recorded.

3/ Flowmeter reading was extremely low.

4/ Jellies >2 cm. in length and other organisms >5 cm. in length are not included.

4/ Jellies >2 cm. in length and other organisms >5 cm. in length are not included.

Table 19 .--Common and scientific names of fish caught

Yellowfin tuna	<u>Neothunnus macropterus</u> (Temminck and Schlegel)
Bigeye tuna	<u>Parathunnus sibi</u> (Temminck and Schlegel)
Skipjack	<u>Katsuwonus pelamis</u> (Linnaeus)
Little tuna	<u>Euthynnus yaito</u> Kishinouye
Dogtooth tuna	<u>Gymnosarda nuda</u> (Günther)
Dolphin	<u>Coryphaena hippurus</u> Linnaeus
Shortnosed spearfish	<u>Tetrapturus angustirostris</u> Tanaka
Black marlin	<u>Istiompax marlina</u> (Jordan and Hill)
Blue marlin	<u>Makaira ampla</u> (Poey)
Striped marlin	<u>Makaira audax</u> (Philippi)
Wahoo	<u>Acanthocybium solandri</u> (Cuvier and Valenciennes)
Whitetip shark	<u>Pterolamiops longimanus</u> (Poey)
Silky shark	<u>Eulamia floridanus</u> (Bigelow, Schroeder, and Springer)
Great blue shark	<u>Prionace glauca</u> (Linnaeus)
Bigeye thresher shark	<u>Alopias superciliosus</u> (Lowe)
Bonito shark	<u>Isurus glaucus</u> Müller and Henle
Hammerhead shark	<u>Sphyraena lewini</u> (Griffith)
Puffer	<u>Lagocephalus lagocephalus</u> (Linnaeus)
Marquesan sardine	<u>Harengula vittata</u> (Cuvier and Valenciennes)
Red snapper	<u>Lutjanus bohar</u> (Forskål)
Green snapper	<u>Aprion virescens</u> Cuvier and Valenciennes
Jack	<u>Caranx ignobilis</u> (Forskål)
Jack	<u>Caranx lugubris</u> Poey
Jack	<u>Caranx melampygus</u> Cuvier and Valenciennes
Barracuda	<u>Sphyraena nigrispinis</u> Temminck and Schlegel
Spiny puffer	<u>Diodon</u> sp.
Rainbow runner	<u>Elagatis bipinnulatus</u> (Quoy and Gaimard)
